Other questions would focus on developing an understanding of what motivates participation by committee or board members in providing oversight of marketing order and agreement committees and boards. The interviews would be conducted by a contractor and are estimated to take approximately one hour.

Need and Use of the Information: AMS will collect qualitative information to develop a baseline for understanding how to work with all industry representatives more effectively, how to assist existing members in clarifying perceived barriers to more effective oversight by industry members, and how to help AMS support leadership growth. Ultimately, AMS hopes to use the information gathered to lay the groundwork for a Leadership Development Program that would increase participation by all groups in committee and board activities.

Food and Nutrition Service

Title: Assessment of Computer Matching in the Food Stamp Program.

OMB Control Number: 0584-NEW.

Summary of Collection: The Food and Nutrition Service (FNS) is responsible for the development and implementation of national Food Stamp Program policy. State agencies are responsible for administration of the Food Stamp Program with FNS monitoring State operations and evaluating performance. One method used by States to verify the eligibility of new food stamp applicants and the continuing eligibility of current recipients is computer matching. A variety of databases are available for this use. FNS plans to conduct a census of the State agencies to gather current information on (1) How States use external databases that have been available to them for several years; and (2) newer matching strategies that have been suggested as relevant to the Food Stamp program or mandated by legislation. The study will be conducted with the support of a contractor who will use telephone interviews as a means of gaining answers to a set of predetermined questions.

Need and Use of the Information: The data collected in this study will provide FNS with a comprehensive overview of how States are currently using computer

matching strategies for error reduction in the Food Stamp Program. The results of the study will provide FNS with valuable information that can inform decision making; assist in policy development; and influence program design decisions. The primary users of the information will be FNS headquarters, FNS regional offices, State Food Stamp agencies, Congress and other Federal agencies concerned with program integrity issues. If this information is not collected, then FNS' ability to improve the integrity of the Food Stamp Program with respect to computer matching will be impaired.

Description of Respondents: State, Local, or Tribal Government; Federal Government.

Number of Respondents: 16.

Frequency of Responses: Reporting: Other (One time).

Total Burden Hours: 212.

SUPPLEMENTARY INFORMATION:

Background

The Administration's Draft Preliminary Food Safety Strategic Plan (available on www.foodsafety.gov), states that the foundation of any food safety system includes the articulation and implementation of a unified research agenda to provide the scientific knowledge needed for prevention, monitoring, surveillance, inspection, regulation, and education programs. It also suggests that there are a number of challenges to improving the scientific basis of the food safety system. For example, it states that gaps exist in our knowledge of microbial pathogens and in our ability to measure their impact on human health. It also notes that the limited knowledge about microbial contamination hampers efforts to develop on-farm preventative controls and systems of testing.

The National Conference will review the current status of food safety at the food animal production level, provide an update on industry quality assurance activities, and review ongoing research in support of animal production food safety practices. The National Conference will provide an opportunity for discussion of (1) gaps in research to address food safety at the animal production level and (2) what additional educational efforts are needed to improve food safety at the animal production level.

Participation in the conference will be limited to available seating

(approximately 250 people). The target audience for the conference includes representatives from food safety regulatory agencies, producers, animal producer organizations, veterinarians, animal scientists, agricultural educators, extension agents, researchers, consumers, and others with interest in food safety.
