

used for research focusing on using ultracold Strontium monohydroxide (SrOH) molecules for precision measurements of physics beyond the Standard Model, including the electron Electric Dipole Moment (eEDM) and dark matter. To conduct these precision measurements, the SrOH molecules must first be laser-slowed and laser-cooled to extremely low temperatures and high densities. A high-power, single-frequency 688 nm laser system from Shanghai Precilasers will be used to cool the SrOH molecules inside a magneto-optical trap (MOT). This process requires precise addressing of a transition with MHz precision and a high photon scattering rate for eReactive trapping.

Docket Number: 24–039. Applicant: University of Chicago, High Bay Research Building, 5602 S Maryland, Chicago, IL 60637. Instrument: Telescope Mirror Test Stand. Manufacturer: Carpentaria Colombo Ferruccio SRL, Italy. Intended Use: The instrument will be used to study the thermal and gravitational deformation of a 5.5 meter diameter, monolithic aluminum mirror which serves as the primary reflecting mirror on a telescope designed to study primordial gravitational waves. The objectives are to characterize the deformation of the mirror under different thermal gradients and changing elevation angles to allow development of algorithms to correct the optical images.

Docket Number: 24–040. Applicant: University of California, Santa Barbara, 2509 Broida Hall, Santa Barbara, CA 93106–9530. Instrument: Low Noise Laser Amplifier. Manufacturer: Shanghai Precilaser Technology Co., Ltd., China. Intended Use: The low noise laser amplifier at 1064 nm will be used in a cold atom experiment at University of California, Santa Barbara, for opCcal trapping and manipulaCon of ultracold potassium-39 atoms. It will be seeded by our own 500 mW 1064 laser and will produce 100 W output power. Potassium-39 atoms at low temperature will be loaded into the opCcal traps created by the laser amplifier. Combining with acousto-opCcal modulators, we will be able to alter the quantum state of the atoms in the opCcal potenCals, and perform experiments about quantum interacCve dynamics and other quantum simulaCons.
