**SUPPLEMENTARY INFORMATION:** The standards are comprised of data elements, formats, and definitions. Each standard document provides an overview diagram that depicts the organization of the standard. These standards were developed and revised by the Environmental Data Standards Council (EDSC). The EDSC is a partnership of among EPA, States, and Tribes which promotes the efficient sharing of environmental information through the cooperative development of data standards.

The standards are intended for use in environmental data exchanges among States, Tribal entities and the U.S. EPA. They are not meant to dictate or to limit data an agency chooses to collect for its own internal purposes. Changes in data standards should not be interpreted to mean that revisions to databases or information systems are required. What they do mean is that formats for sharing data with Exchange Network (EN) partners will change because the Exchange Network has adopted Shared Schema Components based on the data standards. The SSCs are available on the Exchange Network Web site at <http://www.exchangenetwork.net>.

The draft data standards documents can be found on EDSC's Web site at <http://www.envdatastandards.net/> and are available through the Docket system as indicated below.
