Abstract: Section 328 of the Clean Air Act gives EPA responsibility for regulating air pollution from outer continental shelf (OCS) sources located offshore of the states along the Pacific, Arctic and Atlantic Coasts, and along the eastern Gulf of Mexico coast (off the coast of Florida). In general, these OCS sources must obtain preconstruction permits (usually Prevention of Significant Deterioration or "PSD" permits) and title V operating permits, and then maintain ongoing compliance with their permit conditions. Industry respondents include owners or operators of existing and new or modified OCS sources. These respondents must prepare permit applications and, after receiving their permits, conduct testing, monitoring, recordkeeping and reporting as required by their permits. The recordkeeping and reporting requirements are necessary so that EPA can determine whether these sources are meeting all the requirements that apply to them. EPA has delegated the authority to implement and enforce the OCS regulations for sources located off the coast of California to four local air pollution control agencies. These agency respondents must review sources' permit applications and reports, issue permits, observe performance tests and conduct inspections to ensure that the sources are meeting all the requirements that apply to them. Section 176(c) of the Clean Air Act (42 U.S.C. 7401 *et seq.*) requires that all federal actions conform with the State Implementation Plans (SIPs) to attain and maintain the NAAQS. Depending on the type of action, the federal entities must collect information themselves, hire consultants to collect the information or require applicants/sponsors of the federal action to provide the information.

The type and quantity of information required will depend on the circumstances surrounding the action. First, the entity must make an applicability determination. If the source is located within 25 miles of the state's seaward boundaries as established in the regulations, the requirements are the same as those that would be applicable if the source were located in the corresponding onshore

area. State and local air pollution control agencies are usually requested to provide information concerning regulation of offshore sources and are provided opportunities to comment on the proposed determinations. The public is also provided an opportunity to comment on the proposed determinations.

Respondents/affected entities: State governments.

Respondent's obligation to respond: Mandatory.

Estimated number of respondents: 42 (total).

Frequency of response: Annual.

Currently approved estimated burden: 28,174 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Currently approved estimated cost: \$2,532,887, which includes no annualized capital or operation & maintenance costs.

Changes in estimates: The final ICR submitted to OMB will contain revised burden estimates that reflect any changes to the collection over the past three years and any public comments received.
