l. The Stuyvesant Falls Hydroelectric Project is located on Kinderhook Creek in Columbia County, New York. All project features pre-date the license by 80 years, and there were no operational changes or construction when the project was licensed in 1980, backdated to 1965. The Stuyvesant Falls Hydroelectric Project consists of a 13-foot-high, 240-foot-long, masonry gravity dam and stone and concrete intake structure that impounds Kinderhook Creek, forming a 46-acre reservoir with a normal pool elevation of 174.3 feet USGS datum. A Taintor gate and trash sluice is located near the south abutment of the gravity dam. The intake structure is enclosed in a prefabricated steel intake house and carries water from the reservoir to two 7.5-foot-diameter, 2,860-foot-long, riveted-steel pipelines. From the pipelines, water flows into a 25-foot-diameter surge tank. Water is then transported from the surge tank to a brick and steel powerhouse via two 200-foot-long steel penstocks. The powerhouse contains a single 2.8-megawatt horizontal double runner Francis turbine.

Procedures

The meetings are recorded by a stenographer and become part of the formal record of the Commission proceeding on the project. Individuals, organizations, and agencies with environmental expertise and concerns are encouraged to attend the meeting and to assist the staff in defining and clarifying the issues to be addressed in the EA.
