Needs and Uses: This information collection is needed to conduct a needs assessment study which will identify challenges of military couples and their experiences with breast cancer. An online survey was developed to evaluate marital satisfaction and intimacy to determine what interventions may be helpful in the future. The survey includes the Couples Satisfaction Index Scale-4, which has reported reliability and validity. The long-term aim of this study is to determine what types of support may be provided to increase marital satisfaction while maintaining healthy relationships during the breast cancer experience for military families. Further, the aim would be that making effective support available to couples experiencing breast cancer would improve prognosis and optimize overall health for the patient and the partner. The respondent population will be from Brooke Army Medical Center who are at various stages of breast cancer treatment but diagnosed within the last five years.
