Approximately 83 percent of the mineral estate underlying the Pinedale Anticline Project Area is federally owned.

Issues that were analyzed in the SEIS include direct, indirect and cumulative impacts of the project on big game, sage grouse, raptors, migratory birds and their habitat. Impacts to ground and surface water, air quality (both visibility and ozone), and socio-economic effects

of the project on State and local governments were also analyzed. Decisions in the SEIS ROD approve the concentrated phased development of the oil and gas resource, while providing protection and mitigation for wildlife, air, water and other project related impacts, including a monitoring and mitigation fund.

The SEIS ROD resulted from a collaborative process that included the State of Wyoming, the Environmental Protection Agency, county and municipal governments, tribal governments, and other Federal agencies. Public comments from many individuals and organizations were also considered in the Draft and Final SEIS and contributed to the decisions in the ROD.

The Notice of Intent to prepare a SEIS for the Pinedale Anticline Oil and Gas Exploration and Development Project was published in the **Federal Register** on October 21, 2005. A Notice of Availability (NOA) for the Draft SEIS was published on December 15, 2006. The FEIS/GMP analyzes the environmental impacts of the alternatives considered on natural and cultural resources, visitor experience and interpretation, transportation within the park, and park operations.

Alternative A, the no-action alternative, is a continuation of present management approaches regarding visitor experience and resource protection.
