The existing Box Canyon Project consists of: (1) 46-foothigh, 160-foot-long reinforced concrete dam with integral spillway, (2) 217-footlong, 35-foot-diameter diversion tunnel, (3) 1,170-foot-long forebay channel, (4) auxiliary spillway, (5) powerhouse containing four generating units with a combined capacity of 72 MW, (6) 8,850acre reservoir at maximum operating pool elevation of 2030.6 feet, and other associated facilities. PUD No.1 operates the project in a run-of-river mode.

PUD No.1 proposes to upgrade all four turbines with new high efficiency, fish-friendly runners and to rewind the four generators to increase generating capacity to 90 MW. No new structures will be built and no construction in the river will be required. No operational changes will be needed although peak flow through each turbine will be increased from 6,850 cfs to 8,100 cfs which will ultimately result in an 8% increase in average annual energy output.

EPA Science Advisory Board; Notification of Public Advisory Committee Teleconference Meeting

Summary—Pursuant to the Federal Advisory Committee Act, Public Law 92–463, notice is hereby given that the Clean Air Scientific Advisory Committee (CASAC) Subcommittee on Particle Monitoring will meet in a public teleconference on Monday, October 1, 2001 from 11 am to 2 pm Eastern Time. The meeting will be hosted out of Conference Room 6013, US EPA, Ariel Rios Federal Building, 1200 Pennsylvania Avenue, NW, Washington, DC 20004. The meeting is open to the public, however, due to limited space, seating will be on a registration-only basis. Consequently, the public is encouraged to connect via phone to the teleconference. For further information concerning the meeting, or how to register and obtain the phone number, please contact the individuals listed below.

Background—The CASAC Subcommittee on Particle Monitoring (formerly the CASAC Technical Subcommittee for Fine Particle Monitoring) was established in 1996 to provide advice and comment to EPA (through CASAC) on appropriate methods and network strategies for monitoring fine particles in the context of implementing the revised national ambient air quality standards (NAAQS) for particulate matter. The Subcommittee's last meeting/workshop was held on January 22, 2001 (see 66 FR 1343, January 8, 2001 for additional details).

Purpose of the Meeting—This Consultation meeting will be used to comment on EPA's proposed methodology for measuring coarse particulate matter and to discuss alternative approaches to accommodate existing and emerging technologies. The Subcommittee is asked to suggest alternative approaches to EPA's proposed methodology for measuring coarse particulate matter. In the discussion of such approaches, the subcommittee should consider the use of performance based equivalency standards and implementation mechanisms that encourage the use of continuous methods while retaining adequate quality control of data. In addition to continuous methods, the subcommittee is asked to consider the feasibility of incorporating existing integrated methods such as the high volume PM10 sampler and dichotomous samplers into a future PM coarse network. The Subcommittee also is asked to comment on basic network considerations such as the number and location of future PM coarse sites and the frequency for chemical speciation analysis.

Availability of Review Materials—Dr. Russell Wiener can be contacted for information regarding EPA's proposed coarse reference method (919–541–1910).

For Further Information—Members of the public wishing to register for the teleconference or gain access to the conference room on the day of the meeting must contact Ms. Rhonda Fortson, Management Assistant, Clean Air Scientific Advisory Committee, EPA Science Advisory Board (1400A), Suite 6450, U.S. EPA, 1200 Pennsylvania Avenue, NW, Washington, DC 20460; telephone/voice mail at (202) 564-4563; fax at (202) 501-0582; or via e-mail at fortson.rhonda@epa.gov.
