

the 2008/2009 Herring RSA Program noted that the proposed research would provide important information that would improve the understanding of midwater trawling effects on herring aggregations.

GMRI requests that a single vessel or paired vessels perform, under sonar surveillance, midwater trawling for up to four nights using standard midwater trawl gear in Area 1A between June 1 and September 30, 2008. Vessels would conduct five or fewer tows per night, with each tow lasting 2 to 4 hr. All trawling operations would be monitored by GMRI staff. All herring caught during the survey would be deducted from GMRI's Area 1A Herring RSA Program compensation allocation of 1,350 mt. Vessels conducting the survey would not be allowed to exceed their Area 1A compensation allocation while fishing under the EFP. Project investigators propose that sonar data prior to, during, and following trawl fishing pressure will illuminate the effect of midwater trawling on herring aggregations.

Regulations under the Magnuson-Stevens Fishery Conservation and Management Act require publication of this notification to provide interested parties the opportunity to comment on applications for proposed EFPs. The applicant may place requests for minor modifications and extensions to the EFP throughout the year. EFP modifications and extensions may be granted without further notice if they are deemed essential to facilitate completion of the proposed research and minimal so as not to change the scope or impact of the initially approved EFP request.
