SUPPLEMENTARY INFORMATION: On May 24, 2001, The Petroleum Development Corporation (PEDCO) notified the Bureau of Land Management, Rawlins Field Office, that PEDCO and other operators intend to explore for and potentially develop coalbed methane wells in south-central Wyoming. Drilling is expected to last approximately 6 to 10 years, with a 20 to 30 year expected life-of-project. The proposed project area, referred to as the Atlantic Rim Coalbed Methane Project Area, is generally located in Townships 13-20 North, Ranges 89-92 West, Sixth Principal meridian, Carbon County, Wyoming.

The northern most boundary of the project area begins approximately 6 miles southwest of Rawlins, Wyoming, and the southern most boundary lies approximately 1 mile north of Dixon, Wyoming. The project area is approximately 310,335 acres in size. The northern portion of the project area is in the checkerboard land pattern area which consists of a mixture of Federal, State, and private lands and minerals. In the southern portion of the project area, Federal, State and private surface overlies a mineral estate in which the vast majority is owned by the Federal Government. The Federal land surface and Federally owned minerals in the project area are managed by the Rawlins BLM Field Office.

PEDCO and other operators propose to drill a maximum of 3,880 coalbed methane wells and construct associated facilities, including roads, well pads, pipelines, and compressor stations. Information on the potential to economically develop coalbed methane is limited in most of the project area. Drilling of exploratory coalbed methane wells on existing Federal leases will be permitted during the preparation of the EIS. A site-specific environmental assessment (EA) will be prepared for each individual group of wells referred to as pods. Nine exploratory pods have been proposed over the entire project area to define the coal structures in the

area, to determine if the coal can be de-watered to allow for economic development of gas, and to support conclusions made in the EIS.

This EIS will address cumulative impacts and will include consideration of affects of other oil and gas projects addressed in recently completed EISs for the Mulligan Draw Gas Field Project, the Creston/Blue Gap Natural Gas Project, the Continental Divide/Wamsutter II Natural Gas Project, the South Baggs Area Natural Gas Development Project, and the EIS currently being prepared for the Desolation Flats Natural Gas Development Project. Potential issues to be addressed in the EIS include, but are not limited to, impacts to wildlife populations and their habitats, access road development and transportation management, impacts to surface and ground water resources including sedimentation/salinity to the Colorado River System, impacts from drilling and production activities, reclamation, noxious weed control, conflicts with livestock grazing operations, protection of cultural and paleontological resources, threatened and endangered species, conflicts between mineral development and recreational opportunities, and cumulative impacts.
