

project in the aggregate rather than at the individual performance measure set level and offered an opinion that data reported in disaggregated fashion would be burdensome for respondents to provide and would not result in meaningful information for CNCS.

CNCS acknowledges that the level of burden may be higher for some respondents to report on individual performance measure sets and has increased the burden estimate. CNCS notes that the increased burden stems from additional data entry into the CNCS eGrants reporting system and is not a burden caused by additional data collection or other reporting steps peculiar to reporting to CNCS on individual performance measure sets.

Further, given the unique and complex nature of capacity building activities, CNCS believes that the information reported at an individual performance measure set level will provide meaningful and valuable information about how respondents are using VISTA resources in a way that an aggregate cannot.

The intent of VISTA resources is to build capacity of individual organizations and programs to address poverty. Even sites that have similar capacity goals and performance measures—as expressed in individual performance measure sets—may achieve results at different rates, need different levels of VISTA resources to make progress, or require different types of service activities from VISTA members. Reporting data on individual performance sets is necessary for respondents, CNCS, and other stakeholders to monitor this variability in resources, aspirations and accomplishments, both to assist in the accomplishment of the individual project as well as to support the continuous improvement of the VISTA program as a whole.
