

■ 9. Delayed indefinitely, § 26.202, added and delayed indefinitely at 89 FR 63926, is further amended by adding paragraph (d) to read as follows:

§ 26.202 Frequency coordinator requirements.

* * * * *

(d) In the 2360–2395 MHz band:

(1) Site-based local coordination.

(i) The space launch frequency coordinator must initiate a post-grant coordination request for site-specific coordination with the part 87 frequency coordinating committee as well as Federal entities that have completed coordination with that committee.

(ii) Upon request, the space launch frequency coordinator and/or the Space Launch Services licensee must provide any additional information requested by the part 87 frequency coordinating committee regarding a pending recommendation that it has processed but that has not yet been granted.

(iii) It is the responsibility of the space launch frequency coordinator to ensure that its frequency recommendations do not conflict with the frequency recommendations of the part 87 frequency coordinating committee. Should a conflict arise, the affected coordinators are jointly responsible for taking action to resolve the conflict, up to and including notifying the Commission and NTIA that a launch request must be denied.

(2) Per-launch coordination with the National Telecommunications and Information Administration (NTIA).

(i) To protect Federal users in the band, the space launch frequency coordinator shall conduct a post-grant, per-launch coordination with NTIA by providing the Space Launch licensee's site and station registration with their corresponding technical and operational parameters to initiate the coordination process for each proposed launch.

(ii) To assist NTIA's review, the space launch frequency coordinator may provide a showing that the operational and technical parameters of a proposed launch are consistent with a prior successful coordination and that the space launch licensee continues to comply with any conditions or agreements resulting from such prior coordination or that its proposed launch is covered by an applicable coordination agreement(s) with co-frequency entities.

■ 10. Section 26.302 is amended by adding paragraph (c) to read as follows:

§ 26.302 Emission masks.

* * * * *

(c) *2360–2395 MHz.* (1) When using frequency modulation or digital modulation for telemetry or telecommand with an authorized bandwidth equal to or less than 1 MHz the emissions must be attenuated as follows:

(i) On any frequency removed from the assigned frequency by more than 100 percent of the authorized bandwidth up to and including 100 percent plus 0.5 MHz, the attenuation must be at least 60 dB, when measured in a 3.0 kHz bandwidth. This signal need not be attenuated more than 25 dB below 1 milliwatt.

(ii) On any frequency removed from the assigned frequency by more than 100 percent of the authorized bandwidth plus 0.5 MHz, the attenuation must be at least $55 + 10 \log_{10} pY$ dB when measured in a 3.0 kHz bandwidth.

(2) When using frequency modulation or digital modulation for telemetry or telecommand with an authorized bandwidth greater than 1 MHz, the emissions must be attenuated as follows:

(i) On any frequency removed from the assigned frequency by more than 50 percent of the authorized bandwidth plus 0.5 MHz up to and including 50 percent of the authorized bandwidth plus 1.0 MHz, the attenuation must be 60 dB, when measured in a 3.0 kHz bandwidth. The signal need not be attenuated more than 25 dB below 1 milliwatt.

(ii) On any frequency removed from the assigned frequency by more than 50 percent of the authorized bandwidth plus 1.0 MHz, the attenuation must be at least $55 + 10 \log_{10} pY$ dB, when measured in a 3.0 kHz bandwidth.

■ 11. Section 26.303 is amended by adding paragraph (c) to read as follows:

§ 26.303 Power limits.

* * * * *

(c) *2360–2395 MHz.* The EIRP of any station in the 2360–2395 MHz band of the Space Launch Services shall not exceed 25 Watts and the transmitter output power shall not exceed 25 Watts. Transmitter power may be increased to

overcome line and duplexer losses but must not exceed 25 Watts delivered to the antenna.
