Needs and Uses: On November 3, 2008, the Commission adopted a Report and Order, In the Matter of Digital Television Distributed Transmission System Technologies; MB Docket No. 05-312, FCC 08-256 (released Nov. 7, 2008). In this Report and Order, the Commission adopts rules for the use of distributed transmission system ("DTS") technologies in the digital television ("DTV") service. See 47 CFR

73.626. DTS technology allows stations to employ multiple synchronized transmitters spread around a station's service area, rather than the current single-transmitter approach. Each transmitter would broadcast the station's DTV signal on the same channel, similar to analog TV booster stations but more efficiently. Due to the synchronization of the transmitted signals, DTV receivers should be able to treat the multiple signals as reflections or "ghosts" and use "adaptive equalizer" circuitry to cancel or combine them to produce a single signal.

Congress has mandated that after February 17, 2009, full-power television broadcast stations must transmit only in digital signals, and may no longer transmit analog signals. Emergency OMB approval is necessary for this collection to allow full-power DTV stations to use DTS technologies to meet their statutory responsibilities and begin operations on their final, post-transition (digital) channels by their construction deadlines. DTS will provide DTV broadcasters with an important tool for providing optimum signal coverage for their viewers. For some broadcasters that are changing channels or transmitting locations for their digital service, DTS may offer the best option for continuing to provide over-the-air service to current analog viewers, as well as for reaching viewers that have historically been unable to receive a good signal due to terrain or other interference.

FCC Form 301 is being revised to accommodate the filing of DTS applications.

OMB Control Number: 3060-0029.
