This plan was developed cooperatively among the Trustees and the responsible parties, Pepco and ST Services (respectively, the owner and operator of the pipeline) pursuant to the Natural Resource Damage Assessment Regulations, 15 CFR Part 990. SUPPLEMENTARY INFORMATION:

Background

On April 7, 2000, a pipeline ruptured at Pepco's Chalk Point generating facility near Benedict, Maryland, spilling roughly 126,000 gallons of oil into Swanson Creek and the Patuxent River. About 40 miles of environmentally sensitive downstream creeks and shorelines along the Patuxent River were oiled.

Four government agencies—the National Oceanic and Atmospheric Administration, U.S. Fish and Wildlife Service, Maryland Department of Natural Resources, and Maryland Department of Environment—are responsible for restoring natural resources injured by the spill. These agencies act as Trustees on the public's behalf to conduct a natural resource damage assessment, a process for determining the nature and extent of injuries to natural resources and the restoration actions needed to reverse these losses (Oil Pollution Act, 33 U.S.C. 2706(b)).

The Trustees have reviewed the results of numerous studies and consulted with a wide variety of experts in relevant scientific and technical disciplines to determine potential injuries resulting from the spill. Based on this work, the Trustees have estimated losses to: wetlands, fish and shellfish, benthic communities, birds, terrapins and recreational uses.

The Trustees considered numerous restoration alternatives to compensate the public for spill-related injuries and restore similar types of resources, and the services provided by the resources, that were injured by the oil spill (15 CFR 990.54 and 990.55). The Preferred Alternatives include:

(1) *Creating tidal marsh and enhancing shoreline beach to address*
