

compliance with the requirements of the engine test cells/stands NESHAP upon startup.

Form numbers: None.

Respondents/affected entities:

Owners or operators of engine test cells/stands located at major source facilities that are being used for testing internal combustion engines.

Respondent's obligation to respond:

Mandatory (40 CFR part 63, Subpart PFFFF).

Estimated number of respondents: 18 (total).

Frequency of response: Initially, occasionally, and semiannually.

Total estimated burden: 1,719 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$173,607 (per year), which includes \$5,400 in annualized capital and/or operation & maintenance costs.

Changes in the estimates: There is a decrease of 1,324 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. This decrease is due to the correction of two errors. First, in the previous ICR, it was assumed that performance evaluation reports would be submitted every five years. However, performance evaluations are only conducted initially, when new facilities first needed to demonstrate compliance with the standard. Since there will be no new or reconstructed sources over the next three years, performance evaluations are not required. Second, in the previous ICR, it was assumed that one out of the eighteen sources would write an annual deviation report. However, deviations are reported as part of the semiannual compliance status report; separate reports are not required. As a result of these two corrections, there is an overall decrease in the estimated burden cost as currently identified in the OMB Inventory of Approved Burdens.

Acting Director, Collection Strategies Division.
