SUPPLEMENTARY INFORMATION:

I. Background

Title 30, CFR § 57.11053 requires the development of an escape and evacuation plan specifically addressing the unique conditions of each underground metal and nonmetal mine. Section 57.11053 also requires that revisions be made as mining progresses. The plan must be available for review by MSHA inspectors and conspicuously posted at locations convenient to all persons on the surface and underground. The plan is required to be reviewed jointly by the mine operator and MSHA at least once every six months.

II. Current Actions

An accurate, up-to-date plan is vital to the safety of the miners and rescue personnel in the event of an underground mine emergency. The plans are periodically reviewed by MSHA personnel to ensure that plans are accurate and updated as mining progresses and that the escape routes are still effective.

Petitions for Modification

This notice amends a petition for modification of application of an existing standard to add information to a notice published in the **Federal Register** on November 12, 2003 (68 FR 64129), pertaining to the Consol Pennsylvania Coal Company. On October 17, 2003, Consol Pennsylvania Coal Company filed a petition for modification for existing safety standard 30 CFR 75.507 (Power connection points) for the Enlow Fork Mine, to permit non-permissible submersible pumps to be installed in bleeder and return entries and sealed areas of the Mine. On December 2, 2003, the petitioner filed an amendment requesting that the above-referenced petition for modification also apply to the Bailey Mine. Publication of this document provides notice that the petition for modification applies to the Enlow Fork Mine and the Bailey Mine. The petitioner asserts that the proposed alternative method would provide at least the same measure of protection as the existing standard.
