

foraging strategies, searching behavior, searching mechanics, modes of swimming, metabolic costs of foraging and foraging efficiency for different environmental conditions and prey type will be tested. Activities will occur in Antarctica.

PROJECT II — Stock Assessment: Up to 28 species of cetaceans will be taken by photo-id/photogrammetry, behavioral observation, biopsy sampling and satellite tagging. The goals of this research are to study cetacean behavior through direct observation and by attaching SLTDRs and video camera/data recorders to certain species.

PROJECT III — Physiological Adaptations and Genetics Using Tissues of Marine Mammals: Import/export specimen materials from South Africa, Canada, and other locations as specimens may become available. This study of diving adaptations of marine mammals muscle, skeletal material, and other related samples will be obtained from South Africa, Canada, and possibly other locations.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.
