SUPPLEMENTARY INFORMATION:

Introduction

With this notice, we continue the CCP process for Muscatatuck NWR, which was started with the notice of intent we published in 72 FR 27587-27588, May 16, 2007. For more about the initial process and the history of this refuge, see that notice.

Muscatatuck NWR was approved by the Migratory Bird Conservation

Commission and established in 1966 to provide duck breeding and migration habitat. The Refuge covers 7,802 acres, including the 78-acre 'Restle' unit donated to the FWS located 45 miles northwest of the refuge. Muscatatuck is also responsible for nine Farm Service Agency (FSA) conservation easements in surrounding counties, totaling 130.5 acres.

Background

The CCP Process

The National Wildlife Refuge System Administration Act of 1966, as amended by the National Wildlife Refuge System Improvement Act of 1997 (16 U.S.C. 668dd-668ee), requires us to develop a comprehensive conservation plan for each national wildlife refuge. The purpose in developing a CCP is to provide refuge managers with a 15-year strategy for achieving refuge purposes and contributing toward the mission of the National Wildlife Refuge System, consistent with sound principles of fish and wildlife management, conservation, legal mandates, and our policies. In addition to outlining broad management direction on conserving wildlife and their habitats, plans identify wildlife-dependent recreational opportunities available to the public, including opportunities for hunting, fishing, wildlife observation, wildlife photography, and environmental education and interpretation.

CCP Alternatives and Our Preferred Alternative

Priority Issues

During the public scoping process, we, other stakeholders and partners, and the public identified several priority issues, which include habitat management, invasive species control, and demand for additional recreation opportunities and visitor services. To address these issues, we developed and evaluated the following alternatives during the planning process.

Alternative A: Current Management Direction and Activities (No Action)

The current management direction of Muscatatuck NWR would be maintained under this alternative. For NEPA purposes, this is referred to as the "No Action" alternative, a misnomer as some changes will occur over the next 15 years. Management includes conservation, restoration, and preservation but occurs opportunistically as budgets allow. Natural processes would play a large role in the transition and succession of habitats, with little active management. Farming and water management would
