m. *Description of Request*: The exemptee proposes improvements to the sluice gate structure and the right-wing wall of the project. In 2011, the exemptee performed an Inflow Design Flood (IDF) analysis of the project and determined that the existing flood discharge capacity is lower than the IDF flow. Therefore, the exemptee needs to increase the hydraulic discharge capacity of the project to meet or exceed the IDF flow. The remediation plan includes a three-phased approach to resolve the flood discharge capacity. Phase I activities were completed in February 2016. Phase II consists of improvements to the sluice gate structure and Phase III consists of improvements to the right-wing wall. Phase II and Phase III would be performed in concurrence. There would be limited ground disturbance expected in this previously disturbed area due to the project improvements. The improvements would not change project operations or its generating capacity.
