Abstract: The National Park Service (NPS) Social Science Program is authorized by the National Park Service Protection, Interpretation, and Research in System (54 U.S.C. 100701) to collect information that will improve the ability of the NPS to provide effective management, protection, and interpretation across the NPS. However, data is needed to generalize findings across all national park units in the System concerning visitor experiences, attitudes, and spending behaviors. Current data does not allow for comparison across units or against a regional and nationwide benchmark of information. The proposed collection will provide generalizable results for NPS managers and planners across the System to understand and monitor visitor demographics, economic contribution, services, facilities, and infrastructure investments. Park units will be able to compare their unit data with regional and national-level data to make informed decisions in future planning and management efforts.
