

(equivalent to approximately 0.002 pound or 1 gram active ingredient per acre). During research, small scale field trials demonstrate that the pesticide is efficacious in reducing aflatoxin in peanuts by 71 to 98%. As a condition of registration, a large scale field trial is required to further demonstrate the efficacy of the pesticide under regular field conditions. Regardless of treatment with pesticide products containing *Aspergillus flavus* NRRL 21882, peanut and its food/feed commodities must meet current regulatory requirements for aflatoxin levels.

2. *Aspergillus flavus* NRRL 21882 (EPA Registration Number 75624-1). This pesticide is to be used as the Technical Grade Active Ingredient or the Manufacturing Use Product for formulation into end-use products for displacement of the aflatoxin-producing strains of *Aspergillus flavus* from peanuts. Health and ecological effects data submitted and reviewed by the Agency support the conditional registration of the pesticidal active ingredient and the use of the end-use product as described above. An exemption from tolerance for residues for *Aspergillus flavus* NRRL 21882 was granted simultaneously with the conditional registration of the technical and its end-use product. The condition of registration includes analysis of five production batches to meet Agency requirements.
