SUPPLEMENTARY INFORMATION: ICH was established in 1990 as a joint regulatory/industry project to improve, through harmonization, the efficiency of the process for developing and registering new medicinal products in the European Union (EU), Japan, and the United States without compromising the regulatory obligations of safety and effectiveness.

ICH's steering committee recognized that in the rapidly evolving area of gene therapy medicinal products, there is a need to continue to foster the exchange of information that may impact the regulation of such products. The Gene Therapy Discussion Group (GTDG) is leading these activities within ICH.

Regulatory and industry representatives from the three ICH regions (EU, Japan, and the United States), and experts from the European Free Trade Association, Health Canada, and the World Health Organization participate in this group.

The objectives of GTDG are to monitor emerging scientific issues and proactively set out principles that may have a beneficial impact on harmonizing regulation of gene therapy products.
