SUPPLEMENTARY INFORMATION:

Title: New Source Performance Standards for Municipal Waste

Combustors Subpart Ea and Subpart Eb, OMB 2060-0210; EPA ICR No. 1506.09; expiring March 31, 2002. This is a request for extension of a currently approved collection.

Abstract: Owners or operators of the affected facilities described must make one-time-only notifications and reports and must keep records as required of all facilities subject to NSPS requirements. Owners or operators are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. Monitoring requirements specific to NSPS Subpart Ea and Subpart Eb provide information on the operation of the emissions control devices and compliance with the Municipal Waste Combustor (MWC) organics, MWC metals, MWC acid gases, good combustion practices, and nitrogen oxides. Owners and operators must submit semiannual and annual compliance reports. In addition, facilities subject to Subpart Eb are required to keep records of the weekly amount of carbon used for carbon injection and to calculate the estimated hourly carbon injection rate for hours of operation as a means of determining continuous compliance for mercury. Quarterly reports of excess emissions are required under Subpart Ea, while semi-annual reports of excess emissions are required under Subpart Eb. These notifications, reports, and records are essential in determining compliance; and are required, in general, of all sources subject to NSPS.

MWCs subject to Subpart Ea maintain a file of these measurements, and retain the file for at least 2 years. For MWCs subject to Subpart Eb all records are required to be maintained at the source for a period of 5 years. All reports are sent to the delegated State, Tribal, or Local authority. In the event that there is no such delegated authority, the reports are sent directly to the EPA Regional Office.

The required notifications are used to inform the Agency or delegated authority when a source becomes subject to the standard. The reviewing authority may then inspect the source to check if the pollution control devices are properly installed and operated, and the standard is being met. Performance test reports are needed as these are the Agency's record of a source's initial capability to comply with the emission standards, and serve as a record of the operating conditions under which compliance was achieved. The
