

months involved in the standard OMB review process. From FY 1999 through FY 2006, the expedited review process has accounted for a cost savings to the Federal Government and PIs estimated at \$237,087. The obligation to respond is voluntary.

Comments are invited on: (1) The practical utility of the information being gathered; (2) the accuracy of the burden hour estimate; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden to respondents, including use of automated information collection techniques or other forms of information technology. Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask OMB in your comment to withhold your personal identifying information from public review, we cannot guarantee that OMB will be able to do so.

Automated data collection: At the present time, there is no automated way to gather this information, since the information gathering process involves asking members of the public for their opinions on services and facilities that they used during their park visits, services and facilities they are likely to use on future park visits, and opinions regarding park management. The burden on individuals is minimized by rigorously designing public surveys to maximize the ability of the surveys to use small samples of individuals to represent large populations of the public, and by coordinating the program of surveys to maximize the ability of new surveys to build on the findings of prior surveys.

Frequency of collection: The program does not identify the frequency of collection because that number will be determined by the number of surveys submitted under the program.

Description of respondents: A sample of visitors to parks, potential visitors to parks, and residents of communities near parks.

Estimated average number of respondents: The program does not identify the number of respondents because that number will differ in each individual survey, depending on the purpose and design of each information collection.

Estimated average number of responses: The program does not identify the average number of responses because that number will

differ in each individual survey. For most surveys, each respondent will be asked to respond only one time, so in those cases the number of responses will be the same as the number of respondents.

Estimated average time burden per respondent: The program does not identify the average burden hours per response because that number will differ from individual survey to individual survey, depending on the purpose and design of each information collection.

Frequency of Response: Most individual surveys will request only 1 response per respondent.

Estimated total annual reporting burden: The program identifies the requested total number of burden hours annually for all of the surveys to be conducted under its auspices to be 15,000 burden hours per year.
