This notice also provides the following information:

Title of Proposal: Data Collection Techniques for Identifying the Housing Subsidy Status of Survey Respondents.

Description of the Need for Information and Proposed Use: The Department is conducting under contract a study to develop techniques to more accurately identify respondents' housing subsidy status in the American Housing Survey (AHS). The AHS provides information about the Nation's housing needs, with emphasis on the condition of the housing of low income households, as required by the Housing and Urban/Rural Recovery Act of 1983. The AHS data are also the basis of an annual report on housing quality that Congress requires of the President. Further, AHS data allow the Department

to evaluate the housing needs of low-income families.

Accuracy of the results has been an issue in past versions of the AHS. Specifically, a substantial proportion of respondents misidentify their housing subsidy status in the survey. This threatens the accuracy of information that is reported to Congress, and it also can lead the Department to provide inadequate amounts of housing assistance to low-income families.

Some housing subsidy misidentifications in the AHS involve a 'false positive' pattern: individuals who do not receive a housing subsidy based on program records indicate that they do receive a subsidy in the AHS. The present investigation is an attempt to determine whether alternative survey questions would reduce the number of false positives in the AHS.

To identify false positives, it is necessary to first identify individuals who believe themselves in receipt of a housing subsidy, then use program records to determine whether they are actually receiving a subsidy. In the present study, screening interviews matched with program records will be used to identify individuals who fit the false positive pattern. Alternative questions designed to more effectively identify false positives will be tested in a second interview with a sample of such individuals.

Members of the Affected Public: (1) Randomly selected individuals will participate in screening interviews; and (2) a subset of the randomly selected individuals will participate in a second interview.

Estimation of the Total Number of Hours Needed With Those Surveyed to Conduct the Information Collection, Including Number of Respondents, Frequency of Response, and Hours of Response: The researchers will complete screening interviews with 800 individuals. The individuals will be interviewed by telephone, in their homes, or in another place that is convenient for them. The screening interviews will involve questions about housing subsidies, to identify individuals who believe themselves in receipt of a subsidy. Fifteen individuals who believe themselves in receipt of a subsidy but who are not according to program records will participate in a second interview. This second interview will test alternative questions designed to more accurately identify individuals' housing subsidy status.

Estimation of the Total Number of Hours Needed With Those Surveyed to Conduct the Information Collection, Including Number of Respondents, Frequency of Response, and Hours of Response:

Types of respondents	Number of respondents	Number of responses	Minutes per respondent	Total burden hours
Randomly selected individuals	800	1	5	67
Low-income individuals who incorrectly believe that they are receiving a housing subsidy	15	1	60	15
Total	815	82

Status of the Proposed Information Collection: Pending OMB for approval.
