

transportation, translation, child care, and case management.

Healthy People 2010: A set of national health objectives that outlines the prevention agenda for the Nation. *Healthy People 2010* identifies the most significant preventable threats to health and establishes national goals for the next ten years. Individuals, groups, and organizations are encouraged to integrate *Healthy People 2010* into current programs, special events, publications, and meetings. Businesses can use the framework, for example, to guide worksite health promotion activities as well as community-based initiatives. Schools, colleges, and civic and faith-based organizations can undertake activities to further the health of all members of their community. Health care providers can encourage their patients to pursue healthier lifestyles and to participate in community-based programs. By selecting from among the national objectives, individuals and organizations can build an agenda for community health improvement and can monitor results over time.

Holistic: Looking at women's health from the perspective of the whole person and not as a group of different body parts. It includes mental as well as physical health.

Integrated: In the CCOE context, the bringing together of the numerous spheres of activity (6 CCOE components) that touch women's health, including clinical services, research, health training, public health outreach and education, leadership development for women, and technical assistance. The goal of this approach is to unite the strengths of each of these areas, and create a more informed, less fragmented, and efficient system of women's health for underserved women that can be replicated in other populations and communities.

Lifespan: Recognizes that women have different health and psycho-social needs as they encounter transitions across their lives and that the positive and negative effects of health and health behaviors are cumulative across a woman's life.

Multi-disciplinary: An approach that is based on the recognition that women's health crosses many disciplines, and that women's health issues need to be addressed across multiple disciplines, such as adolescent health, geriatrics, cardiology, mental health, reproductive health, nutrition, dermatology, endocrinology, immunology, rheumatology, dental health, etc.

Social Role: Recognizes that women routinely perform multiple, overlapping

social roles that require continuous multi-tasking.

Sustainability: An organization's or program's staying power: the capacity to maintain both the financial resources and the partnerships/linkages needed to provide the services demanded by the CCOE program. It also involves the ability to survive change, incorporate needed changes, and seize opportunities provided by a changing environment.

Underserved Women: In the context of the CCOE model, women who encounter barriers to health care that result from any combination of the following characteristics: poverty, ethnicity and culture, mental or physical state, housing status, geographic location, language, sexual orientation, age, and lack of health insurance/under-insured.

Women-centered/women-focused: Addressing the needs and concerns of women (women-relevant) in an environment that is welcoming to women, fosters a commitment to women, treats women with dignity, and empowers women through respect and education. The emphasis is on working with women, not for women. Women clients are considered active partners in their own health and wellness.

Dated: February 8, 2002.

Wanda K. Jones,

Deputy Assistant Secretary for Health.
