SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for a regular submission (new collection).

NOAA and the U.S. Environmental Protection Agency (EPA) have entered a partnership to estimate the market and non-market economic values of Puerto Rico's coral reef ecosystems. Estimates will be made for all ecosystem services for the Guanica Bay Watershed and for recreation-tourism for all of Puerto Rico's coral reef ecosystems.

The required information is to conduct focus groups to help in designing the full surveys of visitors and residents of Puerto Rico. The four focus groups; two visitor and two resident focus groups, will be used to address the attributes of coral reef ecosystems that people may consider important, and the levels of the attributes to be valued. Attributes would include natural attributes such as water clarity/visibility, coral cover and diversity, and fish abundance and diversity. In addition, issues such as crowded conditions that users (e.g. SCUBA divers, snorkelers, recreational fishers, and wildlife viewers) see while doing their activities on the reefs will be evaluated. This set of focus groups will be conducted one-time only.

II. Method of Collection

Four focus groups will be conducted, two for visitors and two for residents of Puerto Rico. Each focus group will consist of eight people. Focus groups will be conducted at a suitable facility where they will engage in open discussions about reef attributes. Some paper forms, photos and illustrations describing reef attributes will be presented. Focus group sessions will last about two hours per session and will be recorded for the research team (video and audio).
