[Docket No. CP13-160-000]

Northwest Pipeline GP; Notice of Intent To Prepare an Environmental Assessment for the Proposed Blue Water LNG Meter Station and Request for Comments on Environmental Issues

The staff of the Federal Energy Regulatory Commission (FERC or Commission) will prepare an environmental assessment (EA) that will discuss the environmental impacts of the Blue Water Liquefied Natural Gas (LNG) Meter Project involving construction and operation of facilities by Northwest Pipeline GP (Northwest) in Benton County, Washington. The Commission will use this EA in its decision-making process to determine whether the project is in the public convenience and necessity.

This notice announces the opening of the scoping process the Commission will use to gather input from the public and interested agencies on the project. Your input will help the Commission

staff determine what issues they need to evaluate in the EA. Please note that the scoping period will close on July 8, 2013.

This notice is being sent to the Commission's current environmental mailing list for this project. State and local government representatives should notify their constituents of this proposed project and encourage them to comment on their areas of concern.

Northwest provided landowners adjacent to the proposed meter station with a fact sheet prepared by the FERC entitled "An Interstate Natural Gas Facility On My Land? What Do I Need To Know." This fact sheet addresses a number of typically-asked questions, including how to participate in the Commission's proceedings. It is also available for viewing on the FERC Web site (www.ferc.gov).

Summary of the Proposed Project

Northwest proposes to construct and operate a new LNG meter station and associated piping within the yard of its existing Plymouth Peak Shaving Plant (Plant). The Plant is located on about 72 acres on the north side of the Columbia River in Benton County, Washington, about 19 miles south of the city of Kennewick. The Plant consists of two LNG storage tanks with a capacity of 1.2 billion cubic feet each, two liquefaction trains capable of liquefying 12 million standard cubic feet per day of natural gas, vaporization facilities capable of vaporizing 305,300 dekatherms of natural gas per day (Dth/d), and a boil-off gas compression system.¹

The proposed Blue Water LNG Meter could supply up to 216,000 gallons of LNG per day (or 17,705 Dth/d) to Transfuels LLC (Transfuels). Transfuels proposes to construct and operate a non-jurisdictional LNG trunk loading facility on 20 acres of current agricultural land directly north of the fenced boundary for Northwest's Plant. The jurisdictional facilities proposed by Northwest would include:

- A new 360-foot-long pipeline, supported on a pipe rack, to convey LNG from the existing transfer pipeline between the storage tanks, through the new meter runs, and then to the custody transfer point at the plant boundary fence;
- Three new 32-foot-long meter runs and a one-inch-diameter receipt meter and three-inch-diameter piping to handle boil-off-gas coming back from the custody transfer point, all covered by a 20-foot by 24-foot shelter;

¹ These facilities were authorized by the FERC in Docket Nos. CP74-46-000 and CP76-106-000.
