History and Description of the Cultural Item(s)

In 2014, two Lamar incised rims were recovered from the bottom of excavations at a rock pile at site 9GE2085, at Reynolds Plantation in Greene County, GA. Brockington and Associates, Inc. also conducted phosphate testing on soil samples from the rock pile, as well as from areas around the site. The phosphate analysis revealed higher levels of phosphate in the rock pile, suggesting that the rock pile was utilized as a place of burial. No human remains were recovered from 9GE2085 but 2 Lamar incised rims (401–E.4:2–401–E.4:3) were recovered from an area known to have been utilized as a place of burial. The two unassociated funerary objects are two Lamar incised rims.

The geographical location of the burial within the historically documented territory of The Muscogee (Creek) Nation supports a cultural affiliation with The Muscogee (Creek) Nation.

Determinations Made by the University of Georgia, Laboratory of Archaeology

Officials of the University of Georgia, Laboratory of Archaeology have determined that:

- Pursuant to 25 U.S.C. 3001(3)(B), the two cultural items described above are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony and are believed, by a preponderance of the evidence, to have been removed from a specific burial site of a Native American individual.
- Pursuant to 25 U.S.C. 3001(2), there is a relationship of shared group identity that can be reasonably traced between the unassociated funerary objects and The Muscogee (Creek) Nation.
