

degrees north latitude to 43 degrees north latitude and from 150 degrees west longitude to the International Date Line. The SOCAL Range Complex is located approximately between Dana Point, California and San Antonio, Mexico, and extends southwest into the Pacific Ocean. The PMSR is located adjacent to Los Angeles, Ventura, Santa Barbara, and San Luis Obispo Counties along the Pacific Coast of Southern California. The Silver Strand Training Complex is an integrated set of training areas located on and adjacent to the Silver Strand, a narrow, sandy isthmus separating the San Diego Bay from the Pacific Ocean. The NOCAL Range Complex consists of two separate areas located offshore of central and northern California, one northwest of San Francisco and the other southwest of Monterey Bay. Please refer to figure 1–1 of the application for a map of the HCTT Study Area, figure 2–1 through figure 2–6 for additional maps of the Hawaii Study Area and figure 2–7 through figure 2–17 for additional maps of the California Study Area.

The following types of training and testing, which are classified as military readiness activities pursuant to the section 315(f) of Public Law 101–314 (16 U.S.C. 703), are included in the specified activity described in the Action Proponents application:

- Amphibious warfare (in-water detonations);
- Anti-submarine warfare (sonar and other transducers, in-water detonations);
- Expeditionary warfare (in-water detonations, pile driving/extraction);
- Mine warfare (sonar and other transducers, in-water detonations);
- Surface warfare (in-water detonations); and
- Other (sonar and other transducers, air guns, vessel movement, missile and target launch noise from locations on San Nicolas Island, missile and aerial target launch noise from the Pacific Missile Range Facility (PMRF), artillery firing noise from shore to surface gunnery at PMRF).

The application includes proposed mitigation measures for marine mammals that would be implemented during training and testing activities in the HCTT Study Area (see section 11 of the application). Proposed procedural mitigation generally involves: (1) the use of one or more trained Lookouts to diligently observe for specific biological resources within a mitigation zone, (2) requirements for Lookouts to immediately communicate sightings of specific biological resources to the appropriate watch station for information dissemination, and (3) requirements for the watch station to

implement mitigation (*e.g.*, halt an activity) until certain recommencement conditions have been met. Mitigation measures are also proposed for specific mitigation areas and consist of a variety of measures including, but not limited to: conducting a certain number of major training exercises per year, not planning or avoid planning major training exercises, minimizing or not conducting active sonar, conducting a limited amount of hull-mounted mid-frequency active sonar per year, not expending explosive or non-explosive ordnance, and implementing vessel speed reductions in certain circumstances.

The Action Proponents also propose to undertake monitoring and reporting efforts to better understand the impacts of their activities on marine mammals and their habitat, track compliance with take authorizations, and to help investigate the effectiveness of implemented mitigation measures in the HCTT Study Area.

Information Solicited

Interested persons may submit information, suggestions, and comments concerning the Action Proponents' request (see **ADDRESSES**). NMFS will consider all information, suggestions, and comments related to the request during the development of proposed regulations governing the incidental taking of marine mammals by the Action Proponents, if appropriate.
