An International Signaling Point Code (ISPC) is a unique, seven-digit code synonymously used to identify the signaling network of each international carrier. The ISPC has a unique format that is used at the international level for signaling message routing and identification of signaling points. The Commission receives ISPC applications from international carriers on the electronic, internet-based International Bureau Filing System (IBFS). After receipt of the ISPC application, the Commission assigns the ISPC code to each applicant (international carrier) free of charge on a first-come, first-served basis. The collection of this information is required to assign a unique identification code to each international carrier and to facilitate communication among international carriers by their use of the ISPC code on the shared signaling network. The Commission informs the International Telecommunications Union (ITU) of its

assignment of ISPCs to international carriers on an ongoing basis.
