Background: The SAB Integrated Nitrogen Committee is studying the need for integrated research and strategies to reduce reactive nitrogen in the environment. At the global scale, reactive nitrogen from human activities now exceeds that produced by natural terrestrial ecosystems. Reactive nitrogen both benefits and impacts the health and welfare of people and ecosystems. Scientific information suggests that reactive nitrogen is accumulating in the environment and that nitrogen cycling

through biogeochemical pathways has a variety of consequences. Research suggests that the management of reactive nitrogen should be viewed from a systems perspective and integrated across environmental media. Accordingly, linkages between reactive nitrogen induced environmental and human health effects need to be understood to optimize reactive nitrogen research and risk management strategies. Information on the Committee's previous meetings was published on January 17, 2007 (72 FR 1989), March 22, 2007 (72 FR 3492), August 14, 2007 (72 FR 4542) and November 20, 2007 (72 FR 65340) and is also available on the SAB Web site at: <http://www.epa.gov/sab>.

At the upcoming public meeting, the SAB Integrated Nitrogen Committee will: (1) Hear briefings on programs that affect how reactive nitrogen is managed; (2) develop materials needed to create a draft report; (3) plan additional work and writing, and (4) other committee business.
