History and Description of the Remains

Between 1986 and 1990, human remains representing, at minimum, four individuals were removed by Don Wren of Fresno Community College from site CA-MAD-546 on the San Joaquin Experimental Range in Madera County, CA. The excavations were part of an archeological field school led by Wren. In January of 2017, an osteological

examination of faunal collections curated at FCC was conducted to determine if human remains were present. That examination resulted in the identification of the human remains listed in this notice. All the human remains are fragmentary. A total of 79 bone fragments and teeth, representing a minimum of four individuals, were identified. No known individuals were identified. The 136 associated funerary objects include 117 beads (19 glass, 44 shell, 51 steatite, one bone, two unknown), 12 steatite sherds, one steatite ring fragment, and six unmodified steatite fragments.

Site CA-MAD-546 lies in the lower foothills of lands managed by the Forest Service, in an area well-documented ethnographically as the territory of foothill Yokuts peoples and situated in proximity to the traditional territory and contemporary land of the Picayune Rancheria of Chukchansi Indians of California. It includes features and artifacts indicative of late-precontact through late 19th century indigenous occupation.
