SUPPLEMENTARY INFORMATION: MSHA regulations require records to be kept on the examination, testing, calibration, and maintenance of covered atmospheric monitoring systems, electric equipment, grounding offtrack direct-current machines and enclosures of related detached components, circuit breakers, electrical work, and devices for overcurrent protection. The records are intended to verify that examinations and tests were conducted and give insight into the hazardous conditions that have been encountered and those that may be encountered. These records greatly assist those who use them in making decisions during accident investigations to establish root causes and to prevent similar occurrences. These decisions will ultimately affect the safety and health of miners.
