Abstract of Information Available

Human remains representing, at least, one individual have been identified. The one associated funerary object is a bone awl. The human remains were

removed from the burial site in San Miguel County, CO, in 1983 after the site (5SM790) had been vandalized sometime during the winter of 1982–1983. The burial appeared to be a cairn burial, comprised of about 20 sandstone cobbles and two groundstone slabs, within a rockshelter. A detailed assessment of the human remains was made by archaeologists in 1983 and in 1994, who determined the individual was of Native American descent. The human remains belong to an adult female. With the exception of the right arm and hand, one lumbar vertebra, and rib fragments, the upper portion of the body was completely missing. Based upon the burial context, as well as a radiocarbon date from charcoal included in the burial pit (A.D. 460 ± 140), the site is reasonably believed to be from, in archaeological terms, the late Archaic or Formative period.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location of the human remains and associated funerary object described in this notice.
