k. *Description of Request:*

Susquehanna Electric Company (SEC) and PECO Energy Power Company (PECO) request Commission approval for a variance of the minimum flow requirement of the project license. Due to drought conditions and low river flows in the Susquehanna River, SEC and PECO request that they be allowed immediately to include plant leakage of about 800 cubic feet per second (cfs) in the required minimum flow discharge until September 14, 2007, or until flow conditions improve where the Conowingo Project no longer requires leakage be included as part of the minimum flow requirement. According to the license, for the period June 1 through September 14, annually, SEC and PECO must provide a minimum flow release (not including leakage) below the dam of 5,000 cfs, or inflow (as measured at the USGS gage at Marietta, PA), whichever is less. During the fall period, September 15 through November 30, SEC and PECO are required to release a minimum flow of 3,500 cfs not including leakage, or inflow to the project whichever is less, as measured at the Marietta gage.

The SEC and PECO are concerned about the ability of the Conowingo Project to maintain an adequate pond level and storage capacity during the current low flow period. Maintaining storage is necessary for generation and to ensure an adequate water supply for recreational and consumptive uses of the Conowingo Reservoir to include operation of Peach Bottom Atomic Power Station and Muddy Run Pumped Storage Project. Including plant leakage in the minimum flow discharge will contribute to the maintenance of these project water uses during this low flow period. During the period of the minimum flow variance, SEC and PECO will conduct daily monitoring of the Susquehanna River below the project for potential environmental effects. If any abnormal or adverse conditions are observed, SEC and PECO will promptly notify the Maryland Department of Natural Resources.
