

River Estuary, and (2) evaluate how effectively habitat protection and restoration actions in the estuary help Chinook salmon populations in the Snohomish River Basin. The information gathered by this research would benefit the fish by helping recovery planning in the Snohomish River estuary and other estuaries of the Puget Sound. The fish would be captured using fyke nets and beach seines. They would then be anesthetized, measured, and weighed. The fish would also be tissue-sampled and checked for external marks and coded-wire tags. A portion of the captured fish would be sacrificed for full necropsy and a few more may die as an unintended result of the research.
