Discussion

By a notice of proposed rulemaking published in this same issue of the **Federal Register**, the Federal Aviation Administration (FAA) proposes to amend the airworthiness standards for transport category airplanes concerning the airspeed indicating system. The proposed amendment would update the current standards by adding airspeed indication requirements for speeds greater than and less than the speed range for which airspeed indication accuracy requirements currently apply, would add a requirement that airspeed indications not cause the pilot undue difficulty between the initiation of rotation and the achievement of a steady climbing condition during takeoff, and would also add a requirement to limit the effects of airspeed lag. The proposed amendment would harmonize these standards with those being proposed for the European Joint Aviation Requirements (JAR-25).

To address the additional rulemaking requirements proposed for part 25, the FAA also proposes to revise Advisory Circular (AC) 25-7A to describe acceptable means of showing compliance with the proposed rule. This revision only addresses guidance material associated with the airspeed indicating system, and should not be confused with other proposed revisions of AC 25-7A for which the FAA is currently seeking comment. Issuance of a revised AC is contingent on adoption of the proposed revisions to part 25.

Proposed Revisions to AC 25-7A

1. Replace existing paragraph 177a(1)(v) with new paragraphs a(1)(v) and (vi) to read as follows:

(v) An acceptable means of compliance when demonstrating a perceptible speed change between 1.3 V_S to stall warning speed is for the rate of change of IAS with CAS to be not less than 0.75.

(vi) An acceptable means of compliance when demonstrating a perceptible speed change between V_{MO} to $V_{MO} + \frac{2}{3}(V_{DF} - V_{MO})$ is for the rate of change of IAS with CAS to be not less than 0.50.

2. Redesignate existing paragraph 177a(1)(v), Airspeed Lag, as paragraph 177a(1)(vii).
