#### **SUPPLEMENTARY INFORMATION:**

##### **I. Background**

The Department of Labor, as part of its continuing effort to reduce paperwork and respondent (i.e., employer) burden, conducts a preclearance consultation program to provide the public with an opportunity to comment on proposed and continuing information collection requirements in accord with the Paperwork Reduction Act of 1995 (PRA-95) (44 U.S.C. 3506(c)(2)(A)). This

program ensures that information is in the desired format, reporting burden (time and costs) is minimal, collection instruments are clearly understood, and OSHA's estimate of the information collection burden is accurate. The Occupational Safety and Health Act of 1970 (the OSH Act) (29 U.S.C. 651 et seq.) authorizes information collection by employers as necessary or appropriate for enforcement of the Act or for developing information regarding the causes and prevention of occupational injuries, illnesses, and accidents (29 U.S.C. 657). The OSH Act also requires that OSHA obtain such information with minimum burden upon employers, especially those operating small businesses, and to reduce to the maximum extent feasible unnecessary duplication of efforts in obtaining information (29 U.S.C. 657).

The Slings Standard (29 CFR 1910.184) specifies several collection of information (paperwork) requirements, depending on the type of sling (paragraph (e) of the Standard covers alloy steel chain slings; paragraph (f) covers wire rope slings; paragraph (g) covers metal mesh slings; paragraph (h) covers natural and synthetic fiber-rope slings; and paragraph (i) covers synthetic web slings).

The purpose of each of these requirements is to prevent workers from using defective or deteriorated slings, thereby reducing their risk of death or serious injury caused by sling failure during material handling. The information on the identification tags, markings, and codings assist the employer in determining whether the sling can be used for the lifting task. The sling inspections enable early detection of faulty slings. The inspection and repair records provide employers with information about when the last inspection was done and about the type of repairs made. This information provides some assurance about the condition of the slings. These records also provide the most efficient means for an OSHA compliance officer to determine that an employer is complying with the Standard. Proof-testing certificates give employers, workers, and OSHA compliance officers assurance that the slings are safe to use. The certificates also provide the compliance officers with an efficient means to assess employer compliance with the Standard.

##### **II. Special Issues for Comment**

OSHA has a particular interest in comments on the following issues:

- Whether the proposed information collection requirements are necessary for the proper performance of the

Agency's functions, including whether the information is useful;

- The accuracy of OSHA's estimate of the burden (time and costs) of the information collection requirements, including the validity of the methodology and assumptions used;
- The quality, utility, and clarity of the information collected; and
- Ways to minimize the burden on employers who must comply; for example, by using automated or other technological information collection and transmission techniques.

##### **III. Proposed Actions**

OSHA is proposing to increase the existing burden hour estimate for the collection of information requirements specified by the Standard from 20,001 hours to 24,181, a total increase of 4,180 hours. This increase in burden hours is a result of an adjustment in the number of slings (from 1,116,667 to 1,350,000).

*Type of Review:* Extension of a currently approved collection.

*Title:* Slings (29 CFR 1910.184).

*OMB Control Number:* 1218-0223.

*Affected Public:* Business or other for-profits; Not-for-profit organizations; Federal Government; State, Local, or Tribal Government.

*Number of Respondents:* 1,350,000.

*Frequency of Response:* On occasion.

*Total Responses:* 297,676.

*Average Time per Responses:* Varies from 1 minute (.02 hour) to maintain a certificate to 30 minutes (.50 hour) for a manufacturing worker to acquire information from a manufacturer for a new tag, make a new tag, and affix it to a sling.

*Estimated Total Burden Hours:* 24,181.

*Estimated Cost (Operation and Maintenance):* \$0.

#### SUPPLEMENTARY INFORMATION:

##### I. Background

On August 1, 2013, President Obama issued E.O. 13650 to improve chemical facility safety and security. The Working Group charged with implementing the E.O. is co-chaired by DHS, DOL, and EPA, and includes participation from the Departments of Justice, Agriculture, and Transportation, all of whom play a role in Chemical Facility safety and security.
