

for square footage of the construction project. This information was used for editing but is no longer needed. The second change is the addition of a data item to collect the projected completion date to assist with imputation if a response is not obtained in future months.

## II. Method of Collection

An independent systematic sample of construction projects is selected each month according to predetermined sample rates. Once a project is selected, it remains in the sample until completion of the project. Preprinted forms are mailed monthly to respondents to fill in current month data and any revisions to previous months. Respondents also have the option to report online using a password protected site. Nonrespondents are later called by a Census interviewer and are asked to report data over the phone. Having the information available from a database at the time of the interview greatly helps reduce the time respondents spend on the phone. Interviews are scheduled at the convenience of the respondent, which further reduces their burden.
