

vehicle is within the previously approved and permitted launch rates.

The level and scope of environmental impacts associated with the launch of NASA routine payload spacecraft are well within the envelope of impacts that have been addressed in previous FONSIs concerning other launch vehicles and spacecraft. NASA routine payload spacecraft would not increase launch rates nor utilize launch systems beyond the scope of approved programs at VAFB or CCAFS. No NASA routine payload specific processing or launch activities have been identified that would require new permits and/or mitigation measures beyond those currently in place or in coordination at VAFB and CCAFS. No significant new circumstances or information relevant to environmental concerns associated with the launch vehicle have been identified which would affect the earlier findings. As specific spacecraft and missions are fully defined, they will be reviewed against the RPC and the Final EA. If NASA determines that future payloads have the potential for substantially different environmental impacts, further environmental reviews will be conducted and documented, as appropriate. On the basis of the Final EA, NASA has determined that the environmental impacts associated with the proposed action and the specified missions identified as within the scope of the Final EA would not individually or cumulatively have a significant impact on the quality of the human environment.
