[Project No. 13880-000]

Cuffs Run Pumped Storage, LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On November 18, 2010, Cuffs Run Pumped Storage, LLC filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act, proposing to study the feasibility of the Cuffs Run Pumped Storage Project, located on Cuffs Run and the Susquehanna River, near Craley Township, in York and Lancaster Counties, Pennsylvania. The sole

purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project would consist of the following: (1) A new 9,800-foot-long, 225-foot-high earthen dam across Cuffs Run and an unnamed stream forming an upper reservoir that would have an estimated total usable storage capacity of 25,000 acre-feet and a normal maximum surface elevation of 680 feet mean sea level (msl); (2) a new 700-foot-long, 95-foot-high dike across the eastern side of Cuffs Run and a new 1,300-foot-long, 35-foot-high dike across the western end of the upper reservoir; (3) a new 300-foot-long, 110-foot-wide channel in the upper reservoir leading to a submerged intake; (4) a new 1,500-foot-long, 45-foot-diameter concrete-lined penstock splitting into three 20-foot-diameter steel-lined penstocks at the powerhouse; (5) a new underground powerhouse with approximate dimensions of 200 feet long by 150 feet wide, with an 18-foot-diameter vent and cable shaft through the top, and containing three Francis reversible pump turbines rated at approximately 330 megawatts (MW) each; (6) a new tailrace composed of three concrete-lined tunnels; (7) an existing lower reservoir (Lake Clarke) having a usable storage capacity of 68,870 acre-feet and a normal pool elevation of 228 feet msl; (8) a new porous dike that separates the outlet structures from Lake Clarke; (9) a new 3-mile-long, 500-kilovolt (kV) transmission line that would interconnect to a 250-kV transmission line owned by PJM; and (10) appurtenant facilities. The estimated annual generation of the Cuffs Run Pumped Storage Project would be 1,750 gigawatt-hours.

In reference to filings initiating a new proceeding, interventions or protests submitted on or before the comment deadline need not be served on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at <http://www.ferc.gov>. To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link.
