SUPPLEMENTARY INFORMATION: NHTSA has rigorously evaluated its major programs as a matter of policy since 1970. The evaluation of the effectiveness of the Federal Motor Vehicle Safety Standards (FMVSS) began in 1975. The Government Performance and Results Act of 1993 and Executive Order 12866, "Regulatory Planning and Review," issued in October 1993 (58 FR 51735), now oblige all Federal agencies to evaluate their existing programs and regulations. Previously, Executive Order 12291, issued in February 1981 (46 FR 13193), also required reviews of existing regulations. Even before 1981, however, NHTSA was a leader among Federal agencies in evaluating the effectiveness of existing regulations and technologies. There are large databases of motor vehicle crashes that can be analyzed to find out what vehicle and behavioral safety programs work best.

This five-year plan for the Evaluation Division of the Office of Regulatory

Analysis and Evaluation (ORAE) in NHTSA's National Center for Statistics and Analysis presents and discusses the vehicle and behavioral programs, regulations, technologies, and related areas ORAE proposes to evaluate, and it summarizes the findings of ORAE's past evaluations. Depending on scope, evaluations typically take a year or substantially more, counting initial planning, contracting for support, OMB clearance for surveys, data collection, analysis, internal review, approvals, publication, review of public comments, and the last phase of preparing recommendations for subsequent agency action.

Most of NHTSA's crashworthiness and several crash avoidance standards have been evaluated at least once since 1975. A number of consumer-oriented regulations, e.g., bumpers, theft protection, fuel economy and NCAP also have been evaluated. So have promising safety technologies that were at the time not mandatory under Federal regulations, such as electronic stability control for passenger vehicles. Based on these evaluations, NHTSA estimated that vehicle safety technologies had saved an estimated 328,551 lives from 1960 through 2002 and that the FMVSS added an average of \$839 (in 2002 dollars) to the cost of a new passenger car and \$711 to an LTV in model year 2001 (70 FR 3975).

ORAE's plan for calendar years 2008–2012 includes evaluations of new and existing vehicle and behavioral safety programs, regulations, technologies and consumer information programs. Vehicle safety evaluations address crash avoidance, crashworthiness, compatibility and recalls. They study passenger cars, LTVs, heavy trucks, and motorcycles. Behavioral safety evaluations address impaired driving, occupant protection, child passenger safety, motorcycle safety, pedestrians and emergency care (injury survivability).

The plan will be periodically updated in response to public and agency needs, with a complete revision scheduled every five years. The most recent plan before this one was published on January 27, 2004 (69 FR 3992).
