*Needs and Uses:* The Federal Communications Commission (FCC) grants network identification codes to

operators of public data networks on an international protocol. The operators of public data networks file the Data Network Identification Code (DNIC) to obtain the DNIC on a one-time only basis unless there is a change in ownership or the owner chooses to relinquish the code to the FCC. There is no fee charged to operators to file the information with the FCC.

*OMB Control No.:* 3060-XXXX.  
*Title:* International Signaling Point Code (ISPC).

*Form No.:* N/A.  
*Type of Review:* New collection.  
*Respondents:* Business or other for-profit.

*Number of Respondents:* 40.  
*Estimated Time Per Response:* .166 hours (10 minutes)—2 hours.  
*Frequency of Response:* On occasion reporting requirement.

*Total Annual Burden:* 80 hours.  
*Total Annual Cost:* \$100,000.  
*Needs and Uses:* The International Signaling Point Codes (ISPC's) are synonymous with telephone area codes. ISPC's are allocated to the FCC by ITU to issue and administer. These codes are assigned to carriers on a first-come, first-serve basis. If the code is not used within 12 months, the carrier forfeits the code and it is assigned to a different carrier. AT&T was responsible for this service in the 1980's. However, AT&T later informed the FCC and the International Telecommunications Union (ITU) that it would no longer perform this function. The FCC voluntarily assumed responsibility for this function. This was preferred by the carriers because the FCC could serve as a neutral third party.
