The Use of Chimpanzees in NIH-Supported Research

SUMMARY: This notice provides information on the National Institutes of Health's (NIH) reassessment of the need to maintain a colony of 50 chimpanzees for future research and decision to no longer maintain a chimpanzee colony for research. This notice also provides information on conforming updates and procedures related to this action.

FOR FURTHER INFORMATION CONTACT: The Division of Program Coordination, Planning, and Strategic Initiatives, Office of the Director, National Institutes of Health at dpcpsi@od.nih.gov.

SUPPLEMENTARY INFORMATION: On November 18, 2015, the NIH announced it will no longer maintain a colony of 50 chimpanzees for future research and that all NIH-owned chimpanzees that reside outside the federal sanctuary system operated by Chimp Haven, Keithville, Louisiana, are eligible for retirement. Relocation of the chimpanzees to the federal sanctuary system will be conducted as space is available and on a timescale that will allow for optimal transition of each individual chimpanzee with careful consideration of their welfare, including their health and social grouping. See the NIH Director's statement at <https://www.nih.gov/about-nih/who-we-are/nih-director/statements/nih-will-no-longer-support-biomedical-research-chimpanzees>. Consistent with this decision, the NIH is limiting its future support for research using chimpanzees to that which would be permissible in the federal sanctuary system under the Chimpanzee Health Improvement, Maintenance and Protection (CHIMP) Act and the implementing regulations at 42 CFR part 9. Such research must either be noninvasive behavioral studies or medical studies based on information collected during the course of normal veterinary care that is provided for the benefit of the chimpanzee, provided that any such study involves minimal physical and mental harm, pain, distress, and disturbance to the
