Title: Contaminant Occurrence Data in Support of EPA's Second Six-Year Review of National Primary Drinking Water Regulations.

ICR numbers: EPA ICR No. 2231.01.

ICR Status: This ICR is for a new information collection activity. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9 and are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: The Safe Drinking Water Act (SDWA), as amended in 1996, requires that the U.S. EPA review existing national primary drinking water regulations (NPDWRs) no less often than every six years. This cyclical evaluation is referred to as the "Six-Year Review of National Primary Drinking Water Regulations" or, simply, the "Six-Year Review." Through the Six-Year Review process, EPA reviews and assesses risks to human health posed by regulated drinking water contaminants. For the first Six-Year Review cycle (1996-2002), EPA reviewed 68 chemical NPDWRs and the Total Coliform Rule (TCR), which were promulgated prior to the 1996 Amendments. The occurrence assessments conducted for the first Six-Year Review were based on compliance monitoring data from 1993 to 1997, which were provided by States. EPA published the results of this review in the July 18, 2003, edition of the **Federal Register** (68 FR 42907).

To support future Six-Year Reviews, EPA's Office of Water is requesting that States submit, on a voluntary basis, historical compliance monitoring (contaminant occurrence) data for community water systems (CWSs) and non-transient non-community water systems (NTNCWSs). EPA is requesting contaminant occurrence data from 1998 to 2005 for all regulated chemical and radiological contaminants, as well as data from the TCR. EPA anticipates that the compliance monitoring records from this information collection (including all results for analytical detections and non-detections) will provide the data needed to conduct statistical estimates of national occurrence for each regulated contaminant.
