**Abstract:** In 1995, EPA promulgated regulations at 40 CFR part 273 that govern the collection and management of widely-generated hazardous wastes known as "Universal Wastes". Universal Wastes are generated in a variety of non-industrial settings, and

are present in non-hazardous waste management systems. Examples of Universal Wastes include certain batteries, pesticides, mercury-containing lamps and thermostats. The Part 273 regulations are designed to ensure facilities collect these wastes and properly manage them in an appropriate hazardous waste management system. EPA needs to collect notifications of Universal Waste management to obtain general information on these handlers and to facilitate enforcement of the Part 273 regulations. EPA promulgated labeling and marking requirements and accumulation time limits to ensure that Universal Waste is being accumulated responsibly. EPA needs to collect information on illegal Universal Waste shipments to enforce compliance with applicable regulations. Finally, EPA requires tracking of Universal Waste shipments to help ensure that Universal Waste is being properly treated, recycled, or disposed.

In 2001, EPA promulgated regulations in 40 CFR part 266 that provide increased flexibility to facilities managing wastes commonly known as "Mixed Waste." Mixed Wastes are low-level mixed waste (LLMW) and naturally occurring and/or accelerator-produced radioactive material (NARM) containing hazardous waste. These wastes are also regulated by the Atomic Energy Act. As long as specified eligibility criteria and conditions are met, LLMW and NARM are exempt from the definition of hazardous waste as defined in Part 261. Although these wastes are exempt from RCRA manifest, transportation, and disposal requirements, facilities must still comply with the manifest, transportation, and disposal requirements under the NRC (or NRC-Agreement State) regulations. Section 266.345(a) requires that generators or treaters notify EPA or the Authorized State that they are claiming the Transportation and Disposal Conditional Exemption prior to the initial shipment of a waste to a LLRW disposal facility. This exemption notice provides a tool for RCRA program regulatory agencies to become aware of the generator's exemption claims. The information contained in the notification package provides the RCRA program regulatory agencies with a general understanding of the claimant. This information also allows the agencies to document the generator's exemption status and to plan inspections and review exemption-related records.

And finally, in 1992, EPA finalized management standards for used oils destined for recycling. The Agency

codified the used oil management standards at 40 CFR part 279. The regulations at 40 CFR part 279 establish, among other things, streamlined procedures for notification, testing, labeling, and recordkeeping. They also establish a flexible self-implementing approach for tracking off-site shipments that allow used oil handlers to use standard business practices (e.g., invoices, bill of lading). In addition, part 279 sets standards for the prevention and cleanup of releases to the environment during storage and transit. EPA believes these requirements will minimize potential mismanagement of used oils, while not discouraging recycling. Used oil transporters must comply with all applicable packaging, labeling, and placarding requirements of 49 CFR parts 173, 178, and 179. In addition, used oil transporters must report discharges of used oil according to existing 49 CFR part 171 and 33 CFR part 153 requirements.
