SUPPLEMENTARY INFORMATION: GRNMS is one of the largest nearshore live-bottom reefs off the southeastern United States, encompassing approximately 17 square nautical miles. The area earned sanctuary designation in 1981. The sanctuary consists of a series of sandstone outcroppings and ledges up to 10 feet in height, in a predominantly sandy, flat-bottomed sea floor. The live bottom and ledge habitat support an abundant reef fish and invertebrate community. Loggerhead sea turtles, a threatened species, also use GRNMS year-round for foraging and resting, and the reef is within the known winter calving ground for the highly endangered Northern right whale. The GRNMS Advisory Council was established in August 1999 to provide advice and recommendations on management and protection of the sanctuary. The Council through its members also serves as liaison to the community regarding sanctuary issues, and represents community interests, concerns, and management needs to the sanctuary and NOAA.
