Department of the Army; Corps of Engineers

Intent To Prepare a Draft Supplement to the Environmental Impact Statement to Evaluate Construction of Authorized Improvements to the Federal Pascagoula Harbor Navigation Project in Jackson County, MS

AGENCY: Department of the Army, U.S. Army Corps of Engineers, DOD.

ACTION: Notice of intent.

SUMMARY: The Mobile District, U.S. Army Corps of Engineers (Corps), intends to prepare a Draft Supplement to the Environmental Impact Statement (DSEIS) to address the potential impacts associated with construction of authorized improvements to the Federal Pascagoula Harbor Navigation Project in Jackson County, MS. The DSEIS will be used as a basis for ensuring compliance with the National Environmental Policy Act (NEPA) and evaluating the following two alternative plans: "No Action" and widening and deepening to the authorized project dimensions.

Construction of some of the authorized improvements was completed in 1999. Remaining authorized elements which will be evaluated include widening the Gulf Entrance channel from 450 feet to 550 feet wide and deepening the Upper Pascagoula channel from 38 feet to 42 feet deep.

FOR FURTHER INFORMATION CONTACT:

Questions about the proposed action and the DSEIS should be addressed to Ms. Jenny Jacobson, Coastal Environmental Team, Mobile District, U.S. Army Corps of Engineers, P.O. Box 2288, Mobile, AL 36628 by telephone (251) 690-2724 or e-mail her at jennifer.l.jacobson@sam.usace.army.mil.

1. The March 1985 Pascagoula Harbor, MS Feasibility Report investigated increased widths and depths in the Pascagoula and Bayou Casotte navigation channels. Of the plans initially formulated, five were selected for detailed study along with the "No Action" alternative. All plans considered for detailed study included deepening all the channels in Mississippi Sound to 42 feet and the Entrance channel to 44 feet; widening of the Entrance channel to 550 feet; widening of the Bayou Casotte channel to 350 feet; and providing a 1,400-foot turning diameter turning basin just inside the mouth of Bayou Casotte. The 1985 Feasibility Report recommended deepening and widening the Gulf Entrance channel to 44 feet by 550 feet from the 44-foot depth contour in the Gulf of Mexico to the bend at the southern end of Horn Island Pass, deepening and widening Horn Island Pass to 44 feet by 600 feet between the bends at the southern and northern ends of that pass, for a distance of about 4 and 1/2 miles; reconfiguring the impoundment basin in Horn Island Pass to provide a section within the channel limits 1,500 feet long with a total depth of 56 feet to facilitate maintenance by hopper dredge, and allowing for future realignment of the Horn Island Pass reach as natural conditions warrant. In addition, deepening the Lower Pascagoula channel to 42 feet from the bend at the north end of Horn Island Pass, through Mississippi Sound and into the Pascagoula River, and terminating about 500 feet south of the grain elevator for a total distance of about 10 miles; widening the bend at the junction with the Bayou Casotte channel from the present 150 feet to 250 feet to provide a total width at the bend of 600 feet and widening the bend at the mouth of Pascagoula River by 280 feet to provide a total width at the bend of 630 feet. Finally, widening and
