

(e.g., growth promotion, feed efficiency), and effects on the animal microbiome. We specifically asked for feedback on how we could modernize or improve PPM 1240.3605, what challenges were presented by this PPM, and what additional types of claims or ingredients CVM should consider during its review of the policy. Many stakeholders requested that we update our PPM to provide for a larger set of ingredients that can be safely used in animal food to be treated other than as drugs and to encourage innovation that supports human and animal health, promotes sustainable animal production, and provides benefits to the environment.

After a thorough review of PPM 1240.3605, and careful consideration of stakeholder feedback, FDA has determined that PPM 1240.3605 no longer reflects Agency current thinking and is therefore withdrawing the PPM.

FDA encourages firms developing animal food, nutritional ingredients, or non-nutritive ingredients with intended uses that could make them a drug, including substances that are for use in animal food and are intended to affect the structure or any function of the animal's body, to contact the Agency early in the product development process. To contact FDA's Center for Veterinary Medicine about an animal food substance intended to have the effects described above, please email animalfood-premarket@fda.hhs.gov.

FDA intends to issue guidance to clarify our current thinking on the regulation of certain substances that are for use in animal food and are intended to affect the structure or any function of an animal's body.
